

## **AXOS Professional Surround Panner for Pro Tools**

Professional Control for AVID Pro Tools HD, Apple Logic Pro X, MDA Creator

Amsterdam, The Netherlands (IBC – September 11, 2015) – JLCooper’s new AXOS Panner is now available. It’s a high–quality professional joystick for audio surround mixing. AXOS combines a custom touch-sensitive joystick, 5 rotary encoders and 9 tactile switches into a compact USB control surface. These lightning-fast controls allow audio professionals to literally add their own performance mastery to real-time surround panning.

AXOS uses direct support in AVID Pro Tools on Mac and Windows. Mac OS X software plug-ins from JLCooper, give AXOS the added ability to precisely control automated surround mixing in Apple Logic Pro, Steinberg Nuendo and Cubase.

In addition, AXOS will be integrated with MDA Creator version 1.2 for Mac OS X, available in October 2015 from audio leader DTS.

“AXOS makes it easy to automate surround panning Pro Tools HD, Logic Pro X and other applications. MDA Creator support extends the strategic advantages of AXOS controls to benefit audio engineers who are mixing in this fantastic immersive environment,” said Chuck Thompson, JLCooper Vice President and General Manager.

The MDA Creator authoring tool leverages DTS’ license fee-free, open MDA platform for rendering object-based sound mixes into a number of different audio formats, including DTS:X, the company’s next-generation, multi-dimensional audio technology. MDA Creator allows sound engineers to “mix once” for both immersive and conventional sound environments in a combined object- and channel-based audio format, allowing content to be easily distributed for streaming, broadcast, cinema, optical media and more.

“MDA Creator gives audio professionals unprecedented control over the specific placement, movement and volume of sound objects for a variety of mediums,” said Mark Johnson, vice president, media solutions, DTS, Inc. “We are proud to support the AXOS joystick to ensure creators have access to the most advanced audio mixing tools on the market today.”

JLCooper Electronics is devoted to building professional–quality control, interfacing and automation products, used in broadcast television and radio, video production and post-production, audio recording and other markets. JLCooper products are designed and manufactured in the USA and offered through expert re-sellers worldwide.
